

LAKSHYA SHARMA

Full Stack Developer • AI Full Stack Developer

Delhi, India | +91 8826773747 | lakshyasharma.9.0.1.2.3@gmail.com | [GitHub](#) | [Portfolio](#) | [LinkedIn](#)

SUMMARY

Full-stack developer who independently designed and built At Facility, a production-grade outstation cab and trip-planning platform spanning 57 REST endpoints, 14 relational models, and 31 screens across customer, driver, and admin apps. Strong in React/React Native, Node.js/Fastify, TypeScript, PostgreSQL, and applied AI/RAG systems (LangChain, Qdrant). Seeking Full Stack Developer or AI Full Stack Developer roles to own products end-to-end.

TECHNICAL SKILLS

Frontend: React, React Native (Expo), Next.js, Redux, Zustand, TypeScript, TailwindCSS, NativeWind

Backend: Node.js, Express.js, Fastify, REST APIs, Python, FastAPI

Data & Infra: PostgreSQL (Supabase), MongoDB, Redis, Prisma, Docker, Render, Railway

Generative AI: LangChain, RAG pipelines, Qdrant, OpenAI API, Replicate, OpenRouter

Payments & Maps: Razorpay, Mappls REST API, Git/GitHub

PROJECTS

At Facility — Outstation Cab & Trip Planning Platform | *React Native (Expo), Fastify, PostgreSQL/Supabase, Prisma, Redis, Docker, Razorpay*

- Architected and built a production-grade trip-planning platform solo end-to-end: 57 REST endpoints across 13 modules (Fastify v5), 14 relational models (Prisma/PostgreSQL via Supabase), and 31 screens spanning customer, driver, and admin apps in a single React Native/Expo codebase.
- Engineered a Redis-backed real-time layer for live driver location tracking, OTP caching, and multi-tier rate limiting (100 req/min global; stricter per-route limits, e.g. 5 OTP requests/hour) using Upstash Redis and @fastify/rate-limit.
- Built a complete KYC verification pipeline — Aadhaar/PAN/DL/RC/selfie uploads via AWS S3 presigned URLs — with an admin review workflow and status tracking (Unsubmitted/Pending/Verified/Rejected).
- Hardened the API for production with Helmet CSP and 2-year HSTS, environment-locked CORS, and Docker containerization; integrated Razorpay for payments and the Mappls REST API for route and fare calculation; deployment-ready on Render.

ChaiCode AI Assistant — RAG-based Knowledge Assistant | *LangChain, Qdrant, OpenAI API, Node.js, MongoDB, React*

- Built a retrieval-augmented generation assistant with batch ingestion (up to 500 files/request) using LangChain's RecursiveCharacterTextSplitter (400-character chunks, 50–60 character overlap) and OpenAI text-embedding-3-small vectors stored in Qdrant.
- Designed the retrieval and generation flow — top-4 similarity search feeding a context-capped (3,000-character) prompt to gpt-4.1-mini — with per-query latency tracked and persisted to MongoDB for analysis.
- Developed 16 REST endpoints (auth, OAuth, voice, admin ingestion, course management) and containerized the backend with Docker for deployment.

Thumbnail-AI — AI Thumbnail Generation Platform | *Replicate, OpenRouter, React, Node.js, TypeScript, MongoDB, Cloudinary*

- Built and deployed (Vercel + Render) an AI-driven platform combining Replicate's Flux-Schnell image model with OpenRouter LLM-based prompt enhancement, letting creators generate custom YouTube thumbnails from natural-language prompts.
- Implemented an asynchronous generation flow with a 120-second backend timeout and 2-second status polling, plus rate limiting and 429-aware error handling across frontend and backend.
- Built a 25-component responsive dashboard with MongoDB and Cloudinary for persistence and localStorage-based session continuity.

EDUCATION

Bachelor of Computer Applications

Maharaja Surajmal Institute, Janakapuri, Delhi | CGPA: 8.1
